

Did You Know: In the Middle East, bystander CPR rates are 35.4% for men but just 29% for women?*

**National Library of Medicine - Provision of bystander CPR for out-of-hospital cardiac arrest in the Middle East: a retrospective gender-based analysis - PMC (nih.gov)*

Now Introducing The PRESTAN[®] Female Manikin

The PRESTAN Female Manikin was developed with contribution from the American Red Cross Scientific Advisory Council, CPR/AED training instructors, and healthcare professionals to help tackle this issue head-on by:

- **Improving CPR Survival Rates in Women:** Instructors can better prepare students to confidently perform CPR on women by providing a realistic female manikin in training.
- **Encouraging Critical Dialogue:** This manikin will serve as a conversation starter, helping to break down the misconceptions and fears that sometimes prevent effective CPR on women.
- **Eliminating Gender Bias in CPR Training:** It's essential that CPR training be inclusive, and this manikin is a key part of that effort.

Designed to Transform CPR/AED Training

When used in combination with the PRESTAN Female Accessory (to represent a bra), Manikin Shirt, and AED Trainer – PRESTAN aims to provide a full range of realistic training scenarios to help build confidence when learning critical lifesaving skills.
